Our New Powder Coating paint for all our product is now:

POWDURA ECO POWDER COATINGS

From Plastic to Powder

The innovation behind Powdura ECO powder coatings is extraordinary. Plastic waste converts into a durable, high-performing polyester resin that contains 25% pre-consumer recycled plastic. Each pound of Powdura ECO coatings contains the equivalent of 16 sixteen-ounce recycled plastic bottles and delivers the same performance as conventional polyester powder coatings.

We are environmentally conscious and want to do our part.
