

# TAKE A LOAD OFF

with the unparalleled strength of  
Tarrison's wire shelving.

Capacity per shelf:  
 • Up to 48": 1000 lbs  
 • Over 48": 800 lbs

01

Unlike some manufacturers, Tarrison makes the connection. Tarrison's trusses are always connected to the perimeter truss, which significantly reduces deflection and bowing in all standard shelf configurations.

02

Tarrison provides more top mat wires than most competitors in the industry, resulting in a shelf with superior strength!

03

Support rods are foundational to the strength of any shelf, which is why Tarrison only manufactures support rods that are thick, strong, and secure.

# WE HAVE OTHER STRENGTHS TOO

01

Numbered posts simplify the process of installation and ensure that shelves are assembled accurately the first time, every time.

02

Offering a complete line of shelving, Tarrison is your one-stop supplier for any and all shelving needs. No need to source from multiple manufacturers!

03

As of this year, we have completely done away with the traditional hex post levellers and upgraded to a non-marking leveller as part of our standard offering.

04

While some manufacturers may offer low grade, cheaper casters, these can greatly reduce shelf capacity and ruin flooring. High-capacity, non-marking polyurethane casters are our standard, as we refuse to compromise the quality or capacity of our shelving.

05

With our consistently high warehouse stock, you can bet that we will have what you need when you need it.

## MYTH

High-humidity environments like walk-in refrigerators or hothouses need green shelving to protect against rust and corrosion.

## FACT

While many manufacturers market green shelving as the gold standard for humid environments, the green is purely cosmetic and was developed as nothing more than a visual aid to help users differentiate between shelving for humid environments and standard shelving. Because of this association, many have come to believe that they need green shelves in high-humidity environments and have even fallen victim to purchasing unsuitable shelving simply because the units were green.

When it comes to corrosion resistance, what really matters is the material that the shelves are comprised of, which is why our PolySeal shelves have four corrosion-fighting layers, including a unique zinc chromate undercoat that keeps our units free of rust and corrosion for years of intensive use. Why else would we offer a 15-year corrosion warranty?

### Stainless Steel

Type 304 series stainless steel.

### Poly Seal

Clear coat epoxy Sealer  
Clear chromate  
Zinc chloride

### Chrome

Clear chromate  
Chrome  
Bright Nickel

### Value Epoxy

Silver epoxy  
Phosphate coating
